

CriticalContent

Easier, Faster, Better Processes for Controlled Content

CriticalContent is designed to process SOP's, work instructions, protocols and standards faster and with better business insight than ever before. Many organizations currently use a document management system but are still tracking and managing the change, authoring and approval processes by spreadsheet. This makes the process cumbersome, time consuming, laborious and still prone to tasks falling between the cracks.

The CriticalContent Solution delivers a pre-configured repository, set of processes, forms, reports and user portal to drive systematic, consistent and auditable document control processes.

CriticalContent comes with the following:

- Pre-configured workflow processes
- Electronic forms
- Pre-configured repository & indexing
- Digital signatures
- Audit and pre-set reports
- Publishing to a user portal with mobile support
- Rapidly deployed on the IBM Cloud, fully managed by VersaFile

Process

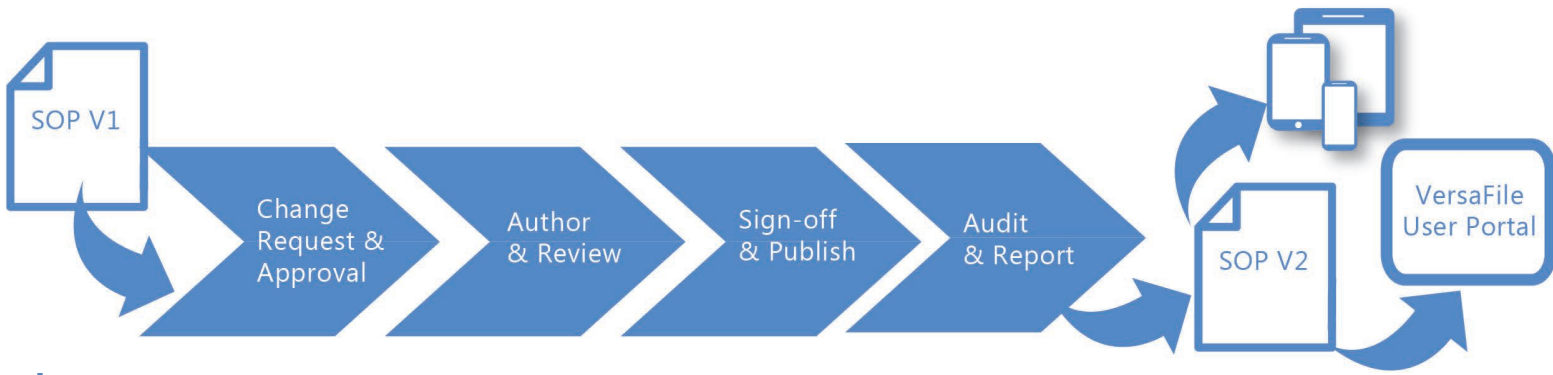

Ditch the spreadsheets and labour intensive task management! CriticalContent workflow eliminates cumbersome tracking tasks allowing more time for value added activities that improve business outcomes. VersaFile delivers compliant and efficient Document Control processes that are included with CriticalContent.

Controlled
Content

Repository

Our pre-defined content repository, retention and disposition system does more than just version control! The secured repository scales from a workgroup to the global enterprise. Leveraging IBM Watson Content Analytics, we surface information facets you didn't even know you wanted.

User Portal

It's intuitive! It's mobile! It's secure! It's easy to use and loaded with goodness to make finding so easy, no training required.

Integration

Already have an Enterprise Content Management (ECM) standard? No Problem! CriticalContent can be made to share with any major ECM platform as your system of record.

Made with IBM

Served from the IBM Cloud

VersaFile CriticalContent is made with IBM ECM software and served from IBM Cloud centres around the globe, including Canada and Europe, allowing us to meet the world's strictest data residency requirements. "Made with IBM" provides peace of mind related to quality allowing it to be a safe decision.
